For 65 uninterrupted years, *Revista da AMRIGS* has served as the official channel of scientific knowledge dissemination for our regional medical association, the Associação Médica do Rio Grande do Sul (AMRIGS). Now, *Trends in Health Sciences* is born.

With a multidisciplinary focus, this new scientific journal aims to be a meeting point for researchers from different fields of Health Sciences, with the goal of promoting the internationalization of scientific research in the area.

During its first 2 years, each issue will be dedicated to a specific theme, allowing for an in-depth and structured approach to topics of relevance in the Health Sciences.

Facing new editorial challenges, *Trends in Health Sciences* follows a rigorous peer review process to ensure the quality and credibility of published articles. Its multidisciplinary editorial board reflects the full scope of the journal, ensuring a comprehensive and critical perspective.

AMRIGS is to be congratulated for its investment in the future and its commitment to maintaining a scientific communication platform aligned with the demands of the global academic community. With *Trends in Health Sciences*, a new chapter in the history of scientific production in health in Brazil is born.

CONFLICTS OF INTEREST: The authors declare no conflicts of interest.

¹ Editor, *Trends in Health Sciences*.

² Associate Editor, *Trends in Health Sciences*.
